

# Affiliate Program

## How can I place my affiliate ID in the plugin?

Blog2Social provides various sales triggers for converting FREE users to PREMIUM upgrades. Affiliates can benefit from these sales.

You can include your affiliate id into the wp-config.php of your own blog or any blog, you install and configure for your users or clients.

It's easy:

1. Open the wp-config.php, located in the root folder of your installation, with a text editor of your choice
2. Scroll to the lines with constants definitions. Normally you find them from line 51 to 58
3. Insert a new line below and add the following code:  
define("B2S\_PLUGIN\_AFFILIATE\_ID", '[put in your affiliate id here]'); e.g.  
define("B2S\_PLUGIN\_AFFILIATE\_ID", '1234');
4. Save your changes.

```
define("B2S_PLUGIN_AFFILIATE_ID", 'put in your affiliate id here');
```

Whenever a user of a blog with your affiliate id stored in the wp-config.php clicks one of the triggers to upgrade and purchases a PREMIUM license, Blog2Social will recognize your affiliate id and automatically assign the sales to your affiliate account.
