

Autoposting, Sharing und Re-Sharing

How do I automatically re-publish my blog posts on social platforms like Medium?

Blog2Social enables you to not only share and post your WordPress posts to Social Media but also re-publish your whole posts on blog networks like Tumblr, Medium, and Torial.

To do so, click on "**Social Media Posts**" your Blog2Social dashboard and select the post you would like to republish on a blog network. Then simply click on "**Share on Social Media**" as usual.

The screenshot shows the Blog2Social dashboard interface. On the left is a dark sidebar with navigation links: Dashboard, Posts, Media, Pages, Comments (2), Opinion Stage, Icegram Collect, Icegram Engage, Profile, Tools, Yoast SEO, Blog2Social, and a list of sub-features. The 'Blog2Social' section is highlighted. The main content area is titled 'Social Media Posts' and includes a header with 'Your complete social media management in one place'. Below this are buttons for 'Share WordPress Content', 'Share New Link Post', 'Share New Text Post', 'Share New Image Post', and 'Share New Video Post'. A filter section allows selection by authors, user, categories, and post types. A list of blog posts is displayed, each with a 'Share on Social Media' button. A green arrow points from the 'Social Media Posts' link in the sidebar to the main content area. Another green arrow points from the 'Share on Social Media' button of the first post to the right.

Blog2Social will forward you to the one-page-editor. To re-publish select the blog networks Tumblr, Medium and Torial in the Sidebar.

In the one-page-editor, you will see that Blog2Social already automatically generated the text of the post. Scroll down through the blog post to check whether you like the format.

If you want to edit the text to your liking you can do so by using the following HTML tags:

<p>

<i>

<a>

Autoposting, Sharing und Re-Sharing

Or click on the buttons "**h1**" and "**h2**" to vary headings.
