

Troubleshooting for Error Messages

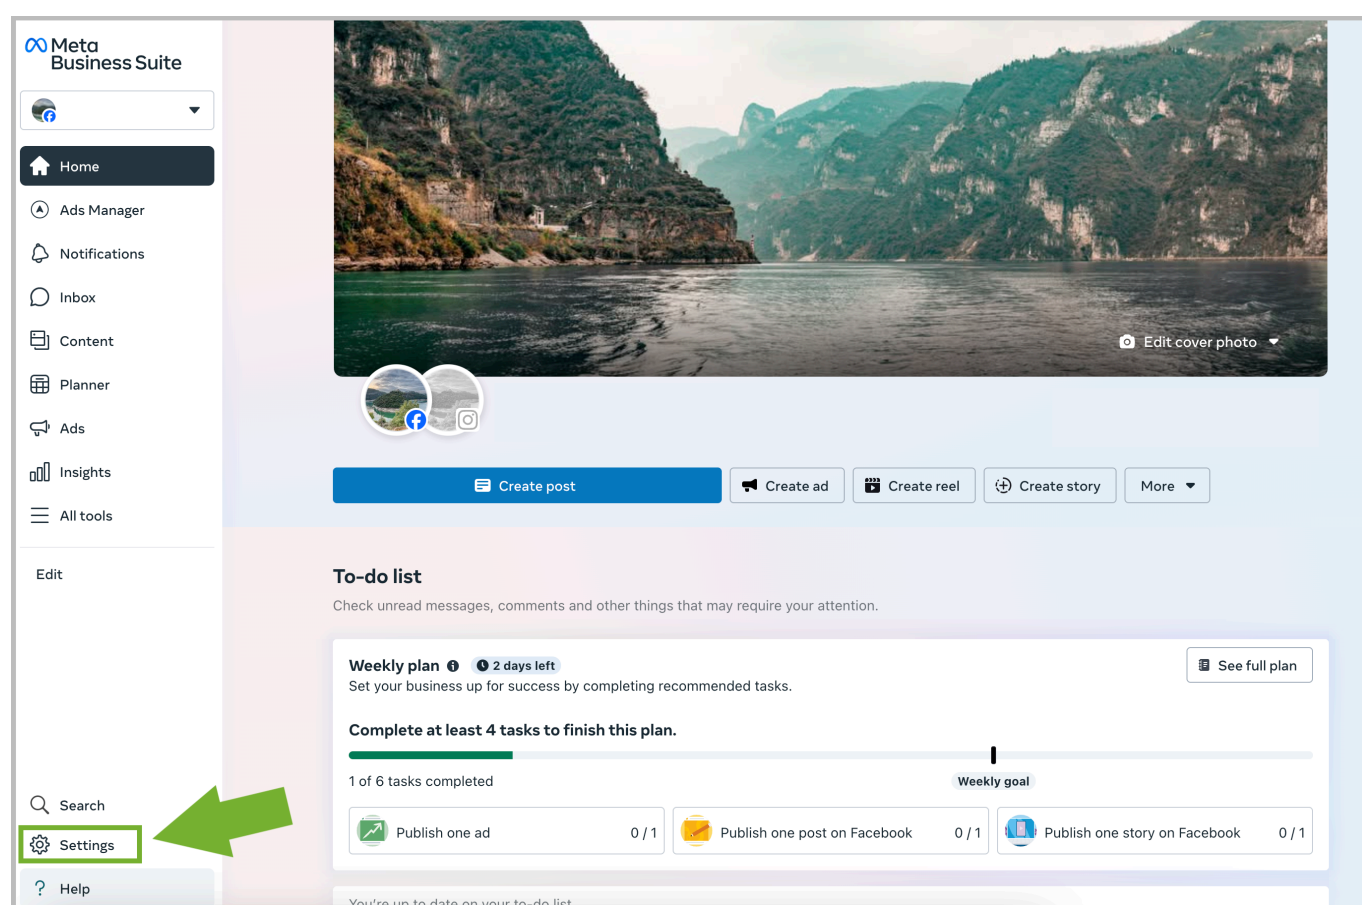

How to check your Facebook Business Manager settings

If you encounter the following notification when trying to post on your Facebook page or Instagram account, there can be various reasons:

"We don't have the permission to publish your post. Please check your authorization."

Kindly check the settings in your [Facebook Business Suite](#) and make sure you have the necessary rights to publish posts on Facebook / Instagram.

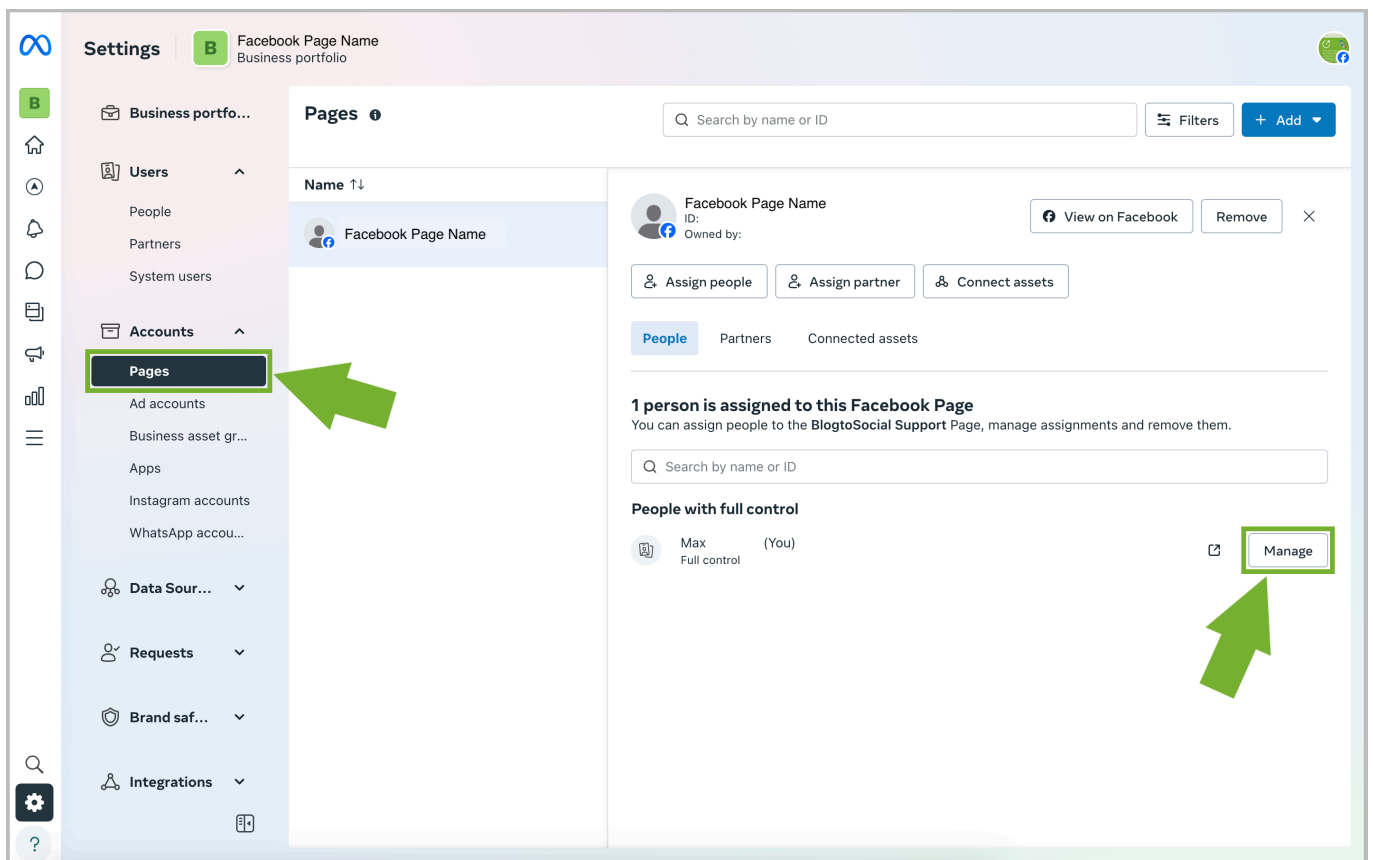

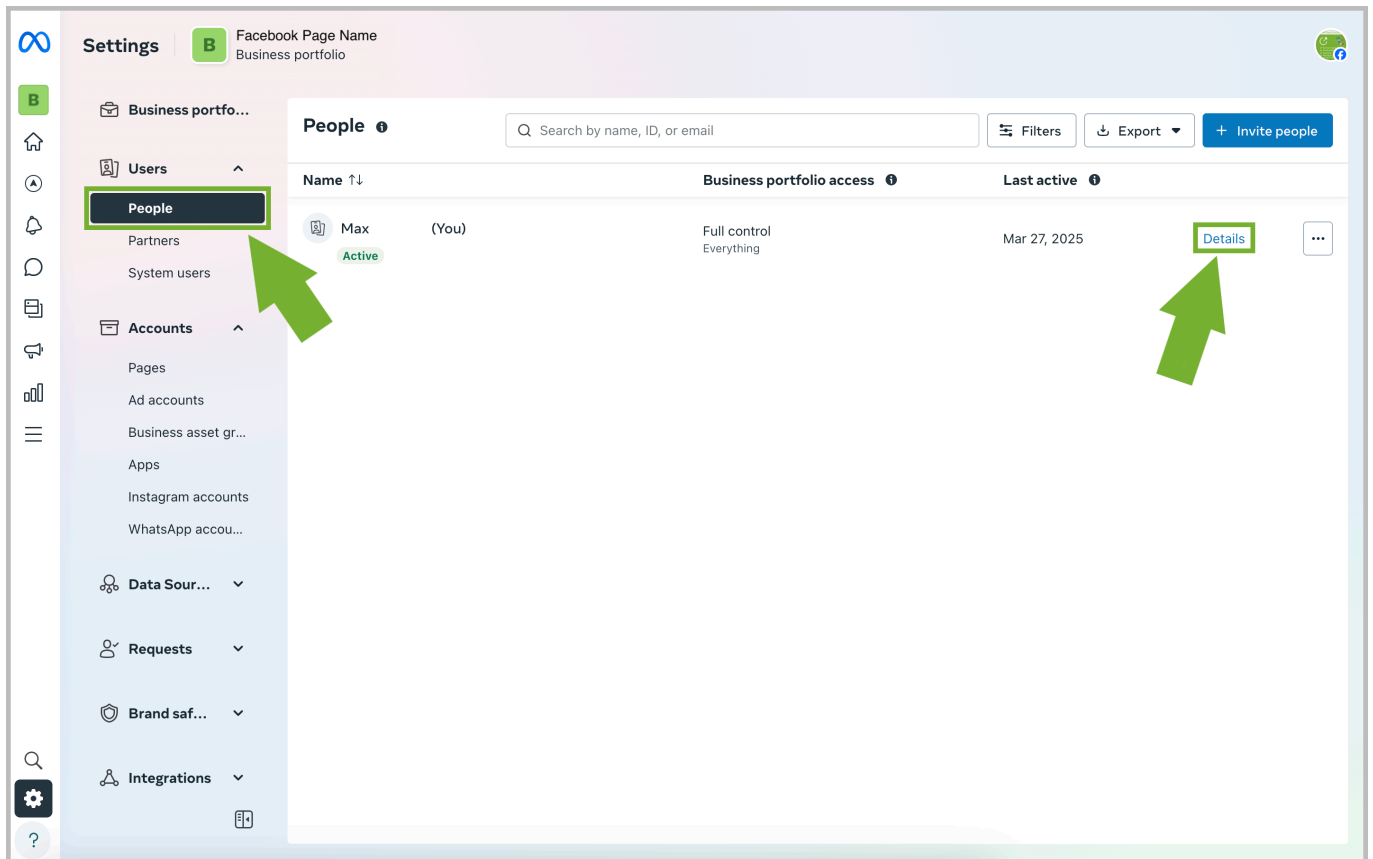

Please click on "**Settings**" in the Meta Business Suite.

Now check the permissions under "**People**" and "**Pages**".

Please click on "**People**" -> "**Details**" or "**Pages**" -> "**Manage**", as shown in the screenshots below, to verify whether you have the permissions to publish content.

Troubleshooting for Error Messages

After granting the necessary rights for the specific person or page, you should be able to post your content using Blog2Social.
