Troubleshooting for Error Messages

Why are some buttons in Blog2Social not working properly?

If some buttons in Blog2Social are not working as expected, this may be caused by a conflict with another plugin or theme on your website. In many of these cases, other plugins override CSS-files in Blog2Social which is causing this behavior.

Here are a few plugin examples that we know of and that may cause problems:
-Buy Me a Coffee
-Borlabs Cache
-AI Engine

To check if another plugin is causing the issue, we recommend using the **Health Check & Troubleshooting** plugin from WordPress.

This tool helps identify common configuration errors and known issues in your WordPress installation. With the **Health Check & Troubleshooting** plugin, you can temporarily deactivate all plugins except Blog2Social and then reactivate them one by one to determine which plugin is causing the conflict.

Here you can download the plugin on WordPress:
Health Check & Troubleshooting

If the issue persists, feel free to contact our support team for further assistance.
