

Customizing Social Media Posts

How to share multiple images in one post?

Photos and graphics are an essential asset of content marketing. Visual content is an eye catcher. Images are irresistible for the reader to look at your social media posts. Images do not only amplify text messages, they also communicate on their own. They attract more attention, can evoke emotions and trigger associations.

Sharing more than one image in a post improves the visibility of your content. You can create image series, show sequences, and level up your storytelling.

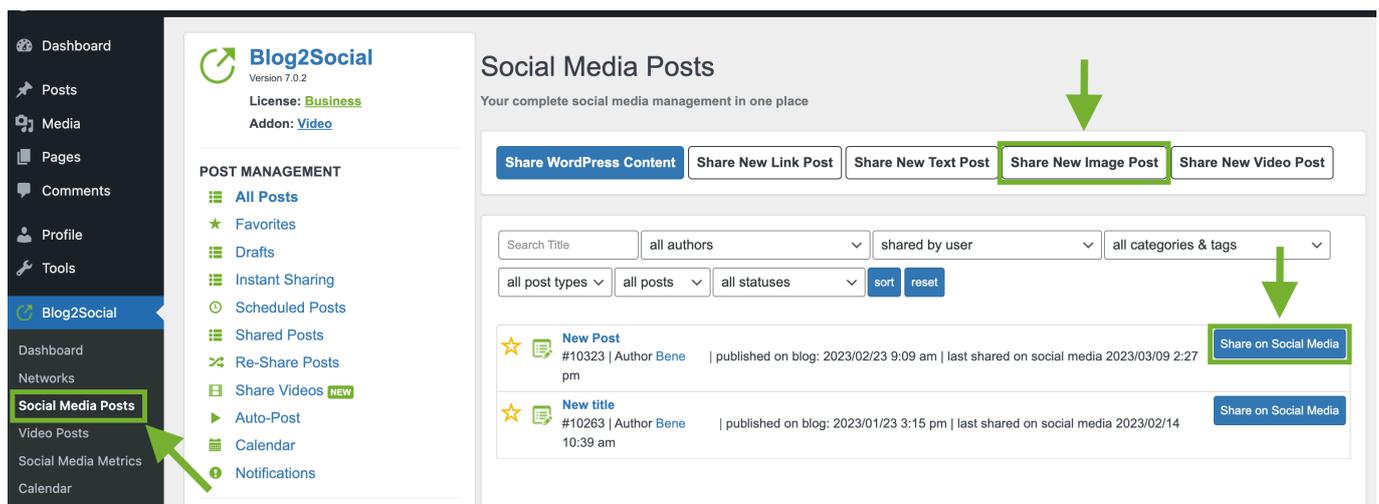

With Blog2Social you can easily share multiple images in one post (image post) on the following social media networks:

- **Facebook Pages** - Up to 4 images
- **Twitter** - Up to 4 images
- **Instagram Business** - Up to 10 images
- **LinkedIn** - Up to 4 images

To do this, you have two options:

- 1) selecting a WordPress post that was already published on your website
- 2) creating a new image post

Please click on "**Social Media Posts**" in your Blog2Social menu. Now you can choose your preferred WordPress post and click on "**Share on Social Media**" or click on "**Share New Image Post**" -> "**Customize & Schedule**" to create a new social media post.

The screenshot displays the Blog2Social dashboard. On the left, the 'Social Media Posts' menu item is highlighted with a green box and a green arrow. The main content area shows the 'Social Media Posts' section with a header 'Your complete social media management in one place'. Below the header, there are five buttons: 'Share WordPress Content', 'Share New Link Post', 'Share New Text Post', 'Share New Image Post', and 'Share New Video Post'. The 'Share New Image Post' button is highlighted with a green box and a green arrow. Below these buttons, there are search and filter options. A list of posts is shown, with the 'Share on Social Media' button for a post highlighted with a green box and a green arrow.

Now you can see the editor mask and start editing your post. You can select the networks Facebook pages, Twitter, Instagram Business and LinkedIn to share your

multiple-image post.

Please note: To share your post with multiple images on Facebook pages, Twitter and LinkedIn please change the post format from “**Link Post**” to “**Image Post**” first.

If your WordPress post or page already contains an image, it will be shown as the first image of your gallery. If you like to change it, you can click on “**Change**

image” and select another image from your post gallery or select or upload another image from your media gallery.

Customizing Social Media Posts

Step 3:

Add more images for your multiple-image post

To share more than one image, you can click on the blue button with an image icon below your gallery image.

A window will open, where you can choose between
1) the images from your blog post if available or

Customizing Social Media Posts

2) upload an image from your media gallery.

When you have chosen an image, you can click on “**Apply image for this image gallery**”.

Customizing Social Media Posts

Now your gallery contains 2 images.

Customizing Social Media Posts

To add more images, you can now repeat this step until you have selected the maximum number of 4-10 images depending on the requirements of the social platform you wish to share your posts.

If you want to share on Instagram and Facebook and Twitter you can either select individual images for each network, or you can apply your primary selection on all networks. If you select a maximum of 5-10 images for Instagram and apply this selection for all networks, your first 4 images will be automatically saved for your Twitter and Facebook posts. All other networks will show your gallery image.

When you have completed your post gallery and you are happy with your post, you can click on "**Share**".

You have now shared a post with multiple images, fantastic!
